# WEIGHTY POINTS ON ALFALFA HAY

Some Important Factors Cited That Help to Determine Market Prices of Product.

### SIZE AND WEIGHT OF BALES

Inspection Service Varies Considerably at Different Centers-Few Bales of Off-Grade Hay Will Hurt Grade of Car.

market price of a product, there are—show, and hundreds of dollars will be distributed as additional prizes. There cannot fall to be a reaction from black. After the simple black dress which has been and still is so fashionable, women may not care for a violent change to bright colored inspection existing at prospective marinspection existing at prospective market, grading and the manner of interpreting the grades are among the more important of these factors, say marketing specialists of the bureau of markets, United States Department of Agriculture

Size and Weight of Bale. The preference for bales of a certain size and weight is so marked in some of the important markets that premiums ranging from 50 cents to \$2 per ton are paid for bales of the size and weight desired. Bales may be oughly classed as small, medium and arge in size. The small and medium sizes are sometimes designated as onequarter and one-third bales. The small pales are made in a perpetual press and are 14 or 16 by 18 inches, variable in length but usually about 36 inches long. Medium bales are also made in A Pig Club Boy Preparing His Prize a perpetual press and are 17 or 18 by 22 inches and about 36 inches long. Large bales are usually made in box

The weight varies considerably, even pressed too loosely.

The character of the inspection

methods now generally designated as warehouse, car-door, plug and bale inspection, there is a difference in applying the greatest and the larger flour mills, but even then the cost of cleaning will be considerable, and when so separated will ordinarily convenient. ing the grades. #### VALUE OF DOCKAGE IN WHEAT Material Sometimes Contains Quanti-

Good for Farm Use.

Dockage found in wheat in some ininces is of real value, while in others it not only may have no value but often may contain ingredients that are ositively harmful if ground with the wheat, say specialists of the United States Department of Agriculture. The value of dockage, therefore, depends on the value of the material eparated from the wheat. Dockage requently contains quantities of nutritious grain and weed seeds, as flaxseed, wild oats, or other cereal grains, Much of this material can be used to good advantage as poultry or stock feed. Wild mustard and flaxseed can be removed from the dockage in Selling Hay by the Auction Method at practically a pure state by the use of a Market Using a "Plug" Method of special cleaning machinery, such as is sometimes found in terminal elevators Under the dockage system of the
